Launching LogPoint 6.11: Working more efficiently across departments

LogPoint 6.11 improves collaboration options for security analysts and supports more efficient tuning and retuning of alert rules.

COPENHAGEN and BOSTON – June 16, 2021 – LogPoint, the global cybersecurity innovator, has launched version 6.11 of its SIEM solution. The new release allows security analysts to control access permissions when sharing alert rules. LogPoint 6.11 automatically shares any update to a rule with all relevant users, allowing departments to work more efficiently across geographies and business units.

Role-based benefits the security team and increases efficiency because:

- Security teams can easily run the same rules on different sets of data
- When analysts update a rule, it is updated across all sets of data
- The need to create duplicate rules every time an analyst tunes an alert is eliminated

LogPoint 6.11 ensures that security analysts are not overwhelmed by redundant or outdated alerts and decreases false positives. The new release continues LogPoint efforts to build the most efficient collaborative environment for security analysts, including the role-based access to dashboards introduced in LogPoint 6.10.

About Logpoint

Logpoint safeguards society in a digital world by helping customers and Managed Security Service Providers (MSSPs) detect cyberattacks. Combining reliable technology with a deep understanding of cybersecurity challenges, Logpoint makes security operations easier, giving organizations the freedom to progress. Logpoint's SIEMand NDRtechnologies improve visibility and give a multi-layered approach to cybersecurity that helps customers and MSSPs in Europe navigate the complex threat landscape. Headquartered in Copenhagen, Denmark, Logpoint has a European foundation and is the only European SIEM vendor with a Common Criteria EAL3+ certification. This demonstrates Logpoint's strong focus on data protection and cybersecurity regulations. For more information, visit http://logpoint.com.
