Business Critical Security by Logpoint Now Available on SAP® Store

By integrating with SAP® solutions, Logpoint's offering delivers solid protection of business-critical systems to customers.

Copenhagen – March 31, 2023 – Logpoint A/S today announced that its [Business Critical Security \(BCS\)](#) solution is now available on [SAP® Store](#), the online marketplace for SAP and partner offerings. BCS integrates with SAP HANA®, SAP NetWeaver®, and SAP ERP and provides greater visibility and capabilities to detect, monitor and respond to security breaches and fraud attempts.

“Logpoint BCS can add an extra layer of security to SAP environments and helps enable advanced analytics and innovative orchestration capabilities that brings security on par with general cybersecurity,” says Krishnagopal Mukundan Kalathil, Product Owner of SAP solutions for Logpoint. “The many companies that use SAP solutions can boost cyber resilience with holistic monitoring, because BCS onboards SAP technology into a SIEM solution, helping them to use the advanced cybersecurity technologies that for example automates workflows and enforces policy, unlocking new business opportunities.”

Logpoint BCS has four different solutions:

Security & Audit Compliance monitoring: Holistic monitoring and automated threat detection in real-time can increase cyber resilience, enable successful incident response, and increase operational efficiency through pre-built dashboards and templates, harnessing data and retrieving contextual insights.

Business Integrity Monitoring: Automated process controls, pre-defined use cases, and behavioral analytics can identify suspicious transactions, deviations from standard business processes and abnormal behavior, and stop fraud before it impacts revenue and compromises business integrity.

PII Access Monitoring: Automatically configures and extracts the Read Access Log (RAL) into SIEM, helping to provide comprehensive security monitoring of sensitive data and enable detection and management of access violations, data leakage, and misuse of sensitive data with a comprehensive all-in-one overview.

IT Service Intelligence: Helping to identify operational degradations across SAP landscapes through pre-configured KPIs to detect and solve outages and downtime before it impacts business processes, internal teams and customers.

SAP Store, found at store.sap.com, delivers a simplified and connected digital customer experience for finding, trying, buying and renewing more than 2,300 solutions from SAP and its partners. There, customers can find the SAP solutions and SAP-validated solutions they need to grow their business. And for each purchase made through SAP Store, SAP will plant a tree.
