Logpoint achieves CCN certification reinforcing its commitment to safeguarding European critical infrastructure

The CCN certification reinforces Logpoint's commitment to safeguarding critical European national infrastructure through strong cyber resilience.

COPENHAGEN, April 29, 2025 –Logpoint, a European threat detection vendor, today announced it has achieved a certification from the National Cryptological Center (CCN) in Spain. The accreditation demonstrates that Logpoint's products meet the requirements for cybersecurity solutions

established by the Spanish government for public administration and critical national infrastructure sectors.

"We're actively working to help safeguard society by protecting digital national infrastructure. With this certification, we can help Spanish organizations do that," says Christian Pijoulat, Regional Director of SEMEA. "The threat landscape is getting increasingly complex with the geopolitical unrest, sophisticated threats, and expanding compliance requirements. We strive to help organizations defy the state of the threat landscape and thrive by reducing cyber risk and ensuring compliance."

With the CCN certification, Spanish public entities and regulated industries can confidently deploy Logpoint's technology to enhance their cybersecurity posture. The certification aligns with the company's broader strategy to expand its presence in the European cybersecurity market and strengthen its position as a trusted partner for critical national infrastructure providers.

Logpoint has a unique position as a European SIEM and NDR vendor with an EAL3+ certification and a SOC II attestation, demonstrating strong product and data security. As a European company, Logpoint aligns with the General Data Protection Regulation (GDPR) and the Schrems II ruling.

About Logpoint

Logpoint safeguards society in a digital world by helping customers and Managed Security Service Providers (MSSPs) detect cyberattacks. Combining reliable technology with a deep understanding of cybersecurity challenges, Logpoint makes security operations easier, giving organizations the freedom to progress. Logpoint's SIEM and NDR technologies improve visibility and give a multi-layered approach to cybersecurity that helps customers and MSSPs in Europe navigate the complex threat landscape. Headquartered in Copenhagen, Denmark, Logpoint has a European foundation and is the only European SIEM vendor with a Common Criteria EAL3+ certification. This demonstrates Logpoint's strong focus on data protection and cybersecurity regulations. For more information, visit http://logpoint.com.
