Logpoint and METCLOUD partner to advance capability to combat the exponential threat of cybercrime across the UK

Partnership will enable organisations to detect and respond to threats across the entire technology landscape faster.

COPENHAGEN & LONDON, September 19, 2023 – Logpoint announced today a partnership with METCLOUD in the UK to address fundamental cybersecurity challenges for organisations as the threat landscape worsens and cybersecurity expertise becomes increasingly scarce. METCLOUD will

offer Logpoint Converged SIEM, including SIEM, SOAR, UEBA, AgentX, and Business-Critical Security (BCS) technologies, to empower customers to efficiently manage, identify and remediate cyber threats across the business landscape.

"Logpoint's solutions give us a greater breadth of capabilities around predictive and preventative analytics, and management and insights across the technology landscape. Logpoint has a unique offering with BCS for SAP, enabling us to address the significant SAP ERP market," says Ian Vickers, CEO at METCLOUD. "SAP customers account for 87 percent of total global commerce, which is an enticing target for cybercriminals. Furthermore, the rapid adoption of AI/ML, IOT, OT, VR, Digital Twins, Robotics and Automation makes for a more connected world and as such significantly increases the risks of cyber attacks."

METCLOUD is providing Logpoint Converged SIEM and support services via their award-winning private and hybrid cloud offering. Logpoint's cybersecurity platform protects the entire business by providing comprehensive threat detection, investigation and response across clients, servers, network systems, cloud workloads and business-critical applications. In addition, METCLOUD has developed its own AI and Data Analytics services that integrate with Logpoint converged SIEM to further accelerate the speed of threat detection and remediation.

"We're excited about the synergies that the partnership between METCLOUD and Logpoint brings to market. The ability for mid-market organisations to consume SIEM-as-a-Service with SOAR capabilities included is valuable because it speeds up threat detection and remediation and this sector tends to lack the expertise, resources and experience required," says Jesper Zerlang, CEO at Logpoint. "For larger organisations that are likely to have well established SOC capabilities in-house, Logpoint BCS for SAP is a unique, enhanced security offering that adds more capabilities to existing teams."

Logpoint has a range of customers in the UK, spanning the public sector and industries like finance, manufacturing, defence, and retail. By converging SIEM, SOAR, UEBA, endpoint security, and BCS technologies into a cybersecurity operations platform. The platform is available on-prem, in private cloud, and as SaaS.

About LogPoint

Logpoint is the creator of a reliable, innovative cybersecurity operations platform — empowering organizations worldwide to thrive in a world of evolving threats. By combining sophisticated technology and a profound understanding of customer challenges, LogPoint bolsters security teams' capabilities while helping them combat current and future threats. Logpoint offers SIEM, UEBA, SOAR and SAP security technologies converged into a complete platform that efficiently detects threats, minimizes false positives, autonomously prioritizes risks, responds to incidents, and much more. Headquartered in Copenhagen, Denmark, with offices around the world, Logpoint is a multinational, multicultural, and inclusive company. For more information, visit http://www.logpoint.com
