Logpoint and Netheimur partner to safeguard organizations in Iceland against cyberattacks

The partnership sees expansion into Icelandic territory with Logpoint SIEM.

COPENHAGEN & REYKJAVIK, February 6, 2025 - [Logpoint](#) today announced a new strategic partnership with Netheimur, an Icelandic Managed Security Service Provider (MSSP), to help Icelandic organizations across the public and private sectors better detect cyber attacks. Netheimur will offer Logpoint SIEM, enabling the MSSP to offer a threat detection platform that gives customers a simple way to monitor their on-premise, SaaS, and cloud

environments and gain system visibility.

The partnership sees Logpoint break into the Icelandic market and Netheimur become the latest MSSP to join its rapidly expanding partnership program. Netheimur, established in 1998, offers comprehensive technology, hosting, and security services to organizations in the private and public sectors. The team consists of developers and technical professionals who deeply understand their customers' challenges and the best ways to solve them. Netheimur will offer and manage Logpoint SIEM, a product that collects and analyses complex log and event data from the infrastructure to detect incidents and meet compliance requirements.

“Threat actors work 24/7, and the ability to detect them quickly is important to stopping cyberattacks. Logpoint SIEM helps detect threats with effective log collection from various environments and a powerful search engine,” says Ellert Kr Stefánsson, CEO at Netheimur. “With Logpoint, we can expand our cybersecurity solutions platform to make it easier for customers to focus on business development initiatives rather than worrying about missing system errors or cyberattacks.”

“Netheimur has a strong focus on enabling their customers through tailored solutions and support, which aligns closely with our ambition of making our customers as successful as possible in detecting threats,” says Fredrik Jubran, Regional Manager for MSSPs at Logpoint. “Together, we can give Icelandic organizations a solution that combines solid SIEM technology with Netheimur's expertise to help them stay safe in the current threat and geopolitical landscape.”

Over the course of the last year, Logpoint has added SecurValue in Italy, Prianto in Germany, Advitum in Sweden, and G'Secure Labs, which operates across the Nordic region. These MSSPs recognize the capabilities of Logpoint SIEM and the benefits of working with a regional cybersecurity vendor.

In the European Cybersecurity Sector 2024 survey carried out by Logpoint, it was revealed that over 90% of MSSPs look for security vendors who can scale and adapt, meet compliance regulations such as GDPR, provide storage within the EU, and offer transparent pricing. MSSPs are also likely to look for bundled offerings from cybersecurity vendors with solutions that align with the flagship platform, with 94% expressing an interest in this type of offering. Logpoint is anticipating and meeting these demands by adding NDR to its

existing suite of associated SIEM services.

Logpoint has also expanded its product portfolio, recently acquiring the Danish Network Detection and Response (NDR) company Muninn to help organizations improve security performance with enhanced cybersecurity visibility. Logpoint's NDR product harnesses AI and lets customers detect threats directly on the network. Logpoint is a European cybersecurity provider that helps customers adhere to EU regulations such as NIS 2 and GDPR.

About Logpoint

Logpoint safeguards society in a digital world by helping customers and Managed Security Service Providers (MSSPs) detect cyberattacks. Combining reliable technology with a deep understanding of cybersecurity challenges, Logpoint makes security operations easier, giving organizations the freedom to progress. Logpoint's [SIEM](#) and [NDR](#) technologies improve visibility and give a multi-layered approach to cybersecurity that helps customers and MSSPs in Europe navigate the complex threat landscape. Headquartered in Copenhagen, Denmark, Logpoint has a European foundation and is the only European SIEM vendor with a Common Criteria EAL3+ certification. This demonstrates Logpoint's strong focus on data protection and cybersecurity regulations. For more information, visit <http://www.logpoint.com>.

About Netheimur

Netheimur ehf is an Icelandic IT vendor established in 1998 when the founders acquired one of the oldest ISPs in Iceland, www.xnet.is, which was established in 1996. Along with professional hosting services, web design + development, and network security solutions, Netheimur offers a wide range of technical expertise. It is a strong technical service provider for organizations in both the private and public sectors. For example, Netheimur has deep knowledge in the retail business, and many of Iceland's largest retailers use Netheimur as their partner. Netheimur has always focused on security and professionalism, teaming up with the best in the business. It is a partner with companies such as Sophos, Microsoft, Netgate, and now LogPoint, which is a great addition to its security solutions offering

(<https://www.netheimur.is>).
