Logpoint boosts BCS solution with cloud security capabilities

- **Logpoint's new BCS for SAP BTB offers cloud security capabilities to help organizations manage monitoring and threat detection in SAP Business Technology Platform (BTP).**

COPENHAGEN, January 10, 2024 – [Logpoint](#) is announcing the release of Logpoint Business-Critical Security (BCS) for SAP Business Technology Platform (BTP), a threat detection and monitoring solution for applications built and managed on the SAP BTP platform. Logpoint BCS for SAP BTB offers extensive threat visibility, which helps secure the platform against malicious activities.

SAP BTP is a set of integrated services and tools that facilitate application development, deployment, and management. It offers database and data management, analytics, machine learning, and more capabilities, making it a versatile platform for creating various applications, including web and mobile applications. However, as SAP BTP serves as a central point to the entire cloud infrastructure, it potentially provides threat actors with access to applications built on the platform and all integrations between SAP BTP and other applications.

“Organizations use SAP BTP for developing and deploying applications, and if it gets compromised, the entire cloud infrastructure can be at risk,” says Sükrü İlker Birakoglu, Senior Director at Logpoint. “Until now, SAP Basis Managers have had to access, review and correlate reports in each cloud system individually, which requires a substantial amount of effort, leading to missed opportunities to handle security breaches before they become problems.”

Logpoint BCS for SAP BTP empowers organizations to proactively mitigate threats and keep attacks at bay with real-time monitoring of security-related events such as logins, users’ geography, timeframes, and changes to roles and configurations. The new solution helps organizations save time and resources and alleviate alert fatigue with intuitive dashboards, offering an easy and prioritized overview of security incidents. Logpoint BCS for SAP BTP allows users to act promptly and effectively mitigate threats.

“Our solution elevates the security of SAP BTP and boosts the security posture,” says Sükrü İlker Birakoglu. “A login from an unauthorized location triggers an alert for immediate notification. The monitoring capability empowers administrators to quickly scrutinize patterns and deviations from established norms and discern potential security threats and anomalies. With our real-time capabilities and actionable dashboards, we empower SAP Basis Managers to be proactive and mitigate threats in the early stages of an attack.”

Logpoint BCS for SAP BTP is an add-on to Logpoint BCS for SAP solutions, which provides visibility across the SAP environment and empowers organizations to effectively respond to threats. Logpoint BCS for SAP integrates with Logpoint’s Converged SIEM platform, delivering comprehensive threat detection and incident response across the entire IT infrastructure.

About Logpoint

Logpoint is the creator of a reliable, innovative cybersecurity operations platform – empowering organizations worldwide to thrive in a world of evolving threats. By combining sophisticated technology and a profound understanding of customer challenges, LogPoint bolsters security teams' capabilities while helping them combat current and future threats. Logpoint offers [SIEM](#), [UEBA](#), [SOAR](#) and [SAP security](#) technologies converged into a complete platform that efficiently detects threats, minimizes false positives, autonomously prioritizes risks, responds to incidents, and much more.

Headquartered in Copenhagen, Denmark, with offices around the world, Logpoint is a multinational, multicultural, and inclusive company. For more information, visit <http://www.logpoint.com>
