Logpoint launches Business-Critical Security solution for SAP SuccessFactors to safeguard personal data

- **Logpoint releases Business-Critical Security (BCS) for SAP SuccessFactors, a real-time end-to-end security and compliance monitoring solution for SAP SuccessFactors, providing holistic, landscape-wide threat visibility.**
- **BCS for SAP SuccessFactors delivers an easy overview with a single pane of glass, automatically identifies issues that compromise data integrity and compliance, and quick time-to-value.**

COPENHAGEN, Denmark, April 13, 2023 – Logpoint today announced the

new release of its Business-Critical Security (BCS) solution for SAP SuccessFactors, enabling real-time security and compliance monitoring of SAP SuccessFactors, which is a Human Capital Management (HCM) application. Through log extraction, continuous monitoring and cross-correlation of data, BCS for SuccessFactors provides holistic, landscape-wide threat visibility in the Logpoint Converged SIEM platform or any other SIEM solution.

SAP SuccessFactors store a wide range of personal data, from basic details like date of birth to potentially sensitive information such as religion, salary, pension schemes, social security numbers, or medical history. Protecting the confidentiality of employee information is essential to meet data privacy laws. In the last two years, [79 percent of organizations have experienced identity-related breaches, and 99 percent believe these could have been prevented](#).

"Being a Cloud-based product raises a series of security challenges; employees working remotely using unsafe devices and networks, the fact that there are no fixed perimeters in the Cloud, and lack of visibility into the enclosed system," says Sükrü Ilker Birakoglu, Logpoint Senior Director. "Today, collecting and investigating the relevant security logs is impossible because they are dispersed throughout many reports and events. Up until now, SuccessFactors has been a black box."

Integrating with the Logpoint Converged SIEM platform or other SIEM solutions, BCS for SuccessFactors provides an easy overview with a single pane of glass, allowing users to get complete threat visibility to improve their security response and effectively distinguish potential risks from critical vulnerabilities that could be exploited. The solution also automatically identifies data integrity and compliance issues, easing the burden of complying with GDPR, CCPA, and other data privacy standards.

"As organizations migrate to SAP cloud solutions like SuccessFactors, they need to be mindful that they themselves are responsible for their own customer data and data security, authentication and authorizations, and to review security logs," says Sükrü Ilker Birakoglu. "We're excited to offer the first and fully automated advanced SuccessFactors monitoring solution in the market, enabling our customers to be confident that compliance monitoring and data privacy is ensured."

BCS for SuccessFactors reads and collects the relevant SuccessFactors logs through SAP iRPA (Intelligent Robotic Process Automation), a connector. The logs are subsequently fed into SIEM for analysis, cross-correlation, and continuous monitoring. Tracking all authorizations, logins, access to sensitive data, misuse of privileges and more enables organizations to detect unauthorized downloads of sensitive data, changes to user roles, role-based permissions, alterations to proxy roles or assignments or DDoS attempts.

BCS for SuccessFactors is easily deployed and configured, allowing a quick roll-out. On top of that, it works for every industry and integrates with any SIEM. To learn more about Logpoint BCS for SuccessFactors, visit Logpoint's blog post about it here.

About LogPoint

Logpoint is the creator of a reliable, innovative cybersecurity operations platform — empowering organizations worldwide to thrive in a world of evolving threats. By combining sophisticated technology and a profound understanding of customer challenges, LogPoint bolsters security teams' capabilities while helping them combat current and future threats. Logpoint offers SIEM, UEBA, SOAR and SAP security technologies converged into a complete platform that efficiently detects threats, minimizes false positives, autonomously prioritizes risks, responds to incidents, and much more. Headquartered in Copenhagen, Denmark, with offices around the world, Logpoint is a multinational, multicultural, and inclusive company. For more information, visit http://www.logpoint.com
